Section IV. NATIONAL STOCK NUMBER AND PART NUMBER INDEX I-1

SECTION I. INTRODUCTION

1. Scope.

This Repair Parts and Special Tools List (RPSTL) lists spares and repair parts; special tools; special test, measurement, and diagnostic equipment (TMDE); and other special support equipment required for performance of unit, direct support, and general support maintenance of the Armored Combat Earthmover, M9 (including depot maintenance spares and repair parts).It authorizes the requisitioning, issue, and disposition of spares, repair parts and special tools as indicated by the source, maintenance and recoverability (SMR) codes.

2. General.

This RPSTL is divided into the following sections:

a. Section Ii, Repair Parts List. A list of spares and repair parts authorized for use in the performance of maintenance. The list also includes parts which must be removed for replacement of the authorized parts. Parts lists are composed of functional groups in ascending alphanumeric sequence, with the parts in each group listed in figure and item number sequence. Bulk materials are listed at the end of Section II.

b. Section III, Special Tools List. A list of special tools, special TMDE, and other special support equipment authorized by this RPSTL for the performance of maintenance.

c. Section IV, National Stock Number and Part Number Index. A list, in ascending National Item Identification Number (NIIN) (last nine numerals) sequence, of all National stock numbers (NSN) appearing in the listings; followed by a list, in alphanumeric sequence, of all part numbers appearing in the listings. National stock numbers and part numbers are cross-referenced to each illustration figure and item number appearance.

3. Explanation of Columns.

The following provides an explanation of columns found in the tabular listings:

a. Item number. The number used to identify each item called out in the illustration.

b. Source, Maintenance, and Recoverability (SMR) Codes. The SMR code is a five position code containing supply/requisitioning information, maintenance category authorization criteria, and disposition instructions.

(1) *Source code.* Source codes are assigned to support items to indicate the manner of acquiring support items for maintenance, repair, or overhaul of end items. Source codes are entered in the first and second positions of the uniform SMR code format as follows:

Code	Definition
PA –	Item procured and stocked for anticipated or known usage.
PB –	Item procured and stocked for insurance purpose because essentiality dictates that a minimum quantity be available in the supply system.
PC –	Item procured and stocked and which otherwise would be coded PA except that is is deteriorative in nature.
PD –	Support item, excluding support equipment, procured for initial issue or outfitting and stocked only for subsequent or additional issue or outfittings. Not subject to automatic replenishment.
PE –	Support equipment procured and stocked for initial issue or outfitting to specified maintenance repair activities.
PF–	Support equipment which will not be stocked but which will be centrally procured on demand.
PG –	Item procured and stocked to provide for sustained support for the life of the equipment. It is applied to an item peculiar to the equipment which, because of probable discontinuance or shutdown of production facilities, would prove uneconomical to reproduce at a later time.
KD –	An item of a depot overhaul/repair kit and not purchased separately. Depot kit defined as a kit that provides items required at the time of overhaul or repair.
KF –	An item of a maintenance kit and not purchased separately. Maintenance kit defined as a kit that provides an item that can be replaced at unit or DS/GS levels of maintenance.
KB –	Item included in both a depot overhaul/repair kit and a maintenance kit.
MO –	Item to be manufactured or fabricated at unit level.
MF –	Item to be manufactured or fabricated at the direct support maintenance level.
MH –	Item to be manufactured or fabricated at the general support maintenance level.
MD –	Item to be manufactured or fabricated at the depot maintenance level.
AO –	Item to be assembled at unit level.
AF –	Item to be assembled at direct support maintenance level.
AH –	Item to be assembled at general support maintenance level.
AD –	Item to be assembled at depot maintenance level.
XA –	Item is not procured or stocked because the requirements for the item will result in the replacement of the next higher assembly.
XB –	Item is not procured or stocked. If not available through salvage, requisition.
XC –	Installation drawing, diagram, instruction sheet, field service drawing, that is identified by manufacturer's part number.
XD –	A support item that is not stocked. When required, item will be procured through normal supply channels.

Note

> Cannibalization or salvage may be used as a source of supply for any items coded above except those coded XA and aircraft support items as restricted by AR 700-42.

(2) *Maintenance code.* Maintenance codes are assigned to indicate the levels of maintenance authorized to USE and REPAIR support items. The maintenance codes are entered in the third and fourth position of the uniform SMR code format as follows:

a. The maintenance code entered in the third position will indicate the lowest maintenance level authorized to remove, replace, and use the support item. The maintenance code entered in the third position will indicate one of the following levels of maintenance:

Code	Application/Explanation
C –	Crew or operator maintenance performed within unit maintenance.
O –	Support item is removed, replaced, used at the unit level.
F –	Support item is removed, replaced, used at the direct support level.
H –	Support item is removed, replaced, used at the general support level.
D –	Support items that are removed, replaced, used at depot, mobile depot, or specialized repair activity only.

b. The maintenance code entered in the fourth position indicates whether the item is to be repaired and identifies the lowest maintenance level with the capability to perform complete repair (i.e., all authorized maintenance functions). This position will contain one of the following codes:

Code	Application/Explanation
O –	The lowest maintenance level capable of complete repair of the support item is the unit level.
F –	The lowest maintenance level capable of complete repair of the support item is the direct support level.
H –	The lowest maintenance level capable of complete repair of the support item is the general support level.
D –	The lowest maintenance level capable of complete repair of the support item is the depot level, performed by depot or specialized repair activity.
L –	Repair restricted to designated specialized repair activity.
Z –	Nonrepairable. No repair is authorized.
B –	No repair is authorized. The item may be reconditioned by adjusting, lubricating, etc., at the user level. No parts or special tools are procured for the maintenance of this item.

(3) *Recoverability code.* Recoverability codes are assigned to support items to indicate the disposition action on unserviceable items. The recoverability code is entered in the fifth position of the uniform SMR code format as follows:

Recoverability Code	Application/Explanation
Z –	Nonrepairable item. When unserviceable, condemn and dispose at the level indicated in position 3.
O –	Repairable item. When uneconomically repairable, condemn and dispose at unit level.
F –	Repairable item. When uneconomically repairable, condemn and dispose at the direct support level.
H –	Repairable item. When uneconomically repairable, condemn and dispose at the general support level.
D –	Repairable item. When beyond lower level repair capability, return to depot. Condemnation and disposal not authorized below depot level.
L –	Repairable item. Repair, condemnation and disposal not authorized below depot/specialized repair activity level.
A –	Item requires special handling or condemnation procedures because of specific reasons f(i.e., precious metal content, high dollar value, critical material or hazardous material). Refer to appropriate manuals/directives for specific instructions.

c. Federal Supply Code for Manufacturer (FSCM). The FSCM is a 5-digit numeric code which is used to identify the manufacturer, distributor, or Government agency, etc., that supplies the item.

d. Part Number. Indicates the primary number used by the manufacturer (individual, company, firm, corporation, or Government activity), which controls the design and characteristics of the item by means of its engineering drawings, specifications, standards, and inspection requirements, to identify an item or range of items.

Note

> When a National stock numbered (NSN) item is requisitioned, the item received may have a different part number than the part being replaced.

e. Description. Indicates the Federal item name and, if required, a minimum description to identify the item. Items that are included in kits and sets are listed below the name of the kit or set with the quantity of each item in the kit or set indicated in the quantity incorporated in unit column. In the Special Tools List, the initial basis of issue (BOI) appears as the last line in the entry for each special tool, special TMDE, and other special support equipment. When density of equipments supported exceeds density spread indicated in the basis of issue, the total authorization is increased accordingly.

f. Quantity. Indicates the quantity of the item used in the breakout shown on the illustration figure, which is prepared for a functional group, subfunctional group, or an assembly. A "V" appearing in this column in lieu of a quantity indicates that no specific quantity is applicable, (e.g., shims, spacers, etc.).

4. Special Information

a. Detailed manufacturing instructions for items source coded to be manufactured or fabricated are found in TM 5-2350-262-20 and TM 5-2350-262-34 maintenance manuals. Bulk materials required to manufacture items are listed in the Bulk Materials List in this manual.

b. Detailed assembly instructions for items source coded to be assembled are found in TM 5-2350-262-20 and TM 5-2350-262-34 maintenance manuals. Assembly components are listed immediately following the item to be assembled.

c. Repair parts kits and gasket sets appear as the last entries in the repair parts listing for the figures in which their parts are listed as repair parts.

Note

"P" source coded items with missing National stock numbers are items which are not recorded in the Army Master Data File (AMDF) and cannot be requisitioned from the supply system. When these NSNs are broadcast in the AMDF, they will be provided by a change to the manual. If justified, these items may be requisitioned on an exception basis using the part number and FSCM listed in this RPSTL.

5. How to Locate Repair Parts.

a. When Part Number is Unknown:

(1) *First.* Using the table of contents, determine the functional subgroup within which the repair part belongs. This is necessary since illustrations are prepared for functional subgroups, and listings are divided into the same groups.

(2) *Second.* Find the illustration covering the subgroup to which the repair part belongs.

(3) *Third.* Identify the repair part on the illustration and note the illustration figure and item number of the repair part.

(4) *Fourth.* Using the Repair Parts List, find the figure and item number noted on the illustration.

b. When National Stock Number or Part Number is Known:

(1) *First.* Using the Index of National Stock Numbers and Part Numbers, find the pertinent National stock number or part number. This index is in ascending NIIN (last nine numerals) sequence, followed by a list of part numbers in ascending alphanumeric sequence, cross-referenced to the illustration figure number and item number.

(2) *Second.* After finding the figure and item number, locate the figure and item number in the repair parts List.

6. Abbreviations.

The abbreviations used in this publication are common in trade practice and MIL-STD-12, Military Standard Abbreviations for use on Drawings, and in Specifications, Standards and Technical Documents.
